RE: Reclamation Contract  
Condition #2  
Roosevelt Mine Revegetation

Dear Ms. Linner:

This letter reports on the revegetation of the Roosevelt Mine as specified in Condition No. 2 of the Mined Land Reclamation Contract for Atlas Minerals.

On June 7, 1985, I inspected the reclaimed Roosevelt Mine site in the company of Messrs. T. Wilson and W. Jensen, also of Atlas Minerals. The enclosed photographs were taken during this visit. Our findings are summarized below:

Stability: Erosion was minimal or absent on all sloped areas. In fact, there did not appear to be any incremental erosion from what was observed during my inspection of May 27, 1984.

Vegetation: There were a variety of species readily observed, although crested wheat was the predominant species noted. As shown in the photographs, some shrubs are now established.

Cover: There was evidence of continuing cattle grazing on the site. Even with this activity, the site was estimated to have about 50-70% vegetative cover compared to the surrounding natural vegetation.

I trust this report satisfies the request for additional information made by the Division relative to Condition No. 2 of the Mined Land Reclamation Contract. Please call at your convenience should you have any questions.

Sincerely,

Richard E. Blubaugh  
Regulatory Affairs Manager
